FROM: Frank Filas, Reclamation Engineer

RE: Site Inspection, Knolls Evaporation Facility, M/045/022,
Tooele County, Utah

On May 19, 1988, I observed the construction which is progressing on the Knolls Project. The south dike is adjacent to I-80 and appears to be nearing completion. Pond I is filling with water and the associated pump station has been built.

I is my understanding that the Great Salt Lake Pumping Project will have to continue for an additional 1-1/2 years before Amax's Knolls Project will be economical. Amax is currently dredging the canal from the Great Salt Lake to the huge pumps which the state of Utah operates.
